

# POLYFOLD CHAIRS

To create these chairs, we evaluated the engineering of most of the plastic folding chair manufacturers and took the best qualities of each to create our chair. SGS Labs, an independent testing facility, checks for consistent quality control at our factories to ensure these chairs meet the highest American production standards. Our own on-site staff also inspects production runs at each factory to make sure customers get nothing but consistent high quality with every purchase.

Our polyfold chairs feature ...

- Drain holes in seat keep water from accumulating
- The specially contoured seats and backs make these chairs exceptionally comfortable
- Available with fan back or plain back
- Seats and backs are softened to avoid the brittleness that causes chair breakage in extreme weather
- Interlocking — they can stack 65 chairs high!
- Lead-free
